## **YEAR 9 STUDENTS**

Protect your child against **Meningococcal Disease** and **Diphtheria, Tetanus and Polio with the MenACWY and DTP 3:1 vaccination**

**Consent forms are to be completed electronically for each vaccination and are at the end of this letter**

The school immunisation team will visit your school on 21<sup>st</sup> January 2026 to offer students the MenACWY and DTP Vaccinations. **This is given by two injections** and is offered to **YEAR 9 students** and **any Year 10 and Year 11 students who have previously missed these vaccinations.**

The MenACWY vaccine helps protect your child against four types of Meningococcal bacteria A C W and Y that can cause Meningitis (inflammation of the brain) and Septicaemia (blood poisoning). Adolescents and young adults are at higher risk of getting meningococcal disease, therefore vaccination aims to provide direct protection within this population.

The Diphtheria/Tetanus/Polio (DTP 3-in-1) vaccine is a booster to complete the four DTP immunisations given in the childhood preschool immunisation schedule. The vaccine strengthens protection against these serious diseases and keeps young people protected for many more years. Diphtheria is a rare but serious disease that can lead to breathing problems and may damage the heart and nerves. Tetanus is a severe disease affecting the nervous system and is caused by germs found in the soil that enter the body through open cuts or burns. Polio is a virus that attacks the nervous system.

The cut off for the submission of the consent forms will be midnight before the immunisation session. Any forms submitted after this time, students will be offered a later immunisation date.

**After you have completed the consent forms, please inform the school before the day of vaccinating If you wish to withdraw consent.**

**Or if there are any changes to your Childs Health, please contact the school or the school immunisation team.**

Please click on the links below for more information about the vaccines.
